

Patients with traumatic brain injury needed for research study

- Title:** Mechanisms underlying vision disturbance in post-trauma vision syndrome (PTVS)
- Purpose:** The purpose of this study is to gain a better understanding of how brain injuries (also called concussions) can lead to changes in vision and balance.
If you volunteer to participate you will be asked to be scanned by a magnetic resonance imaging (MRI) machine and have your eye movements measured by an eye tracking machine at Queen's University.
- Who:** You may be considered for participation if you are between 18 and 85 years of age and have a history of traumatic brain injury with symptoms for greater than three months without any changes in your vision or balance.
- Time commitment:** Participants will be asked to commit for 2 hours total during 1 or 2 testing sessions.
- Reimbursement:** Participants will be financially reimbursed (\$50).
- Location:** Room 260, Botterall Hall
Queen's University, Kingston, Ontario

If you are interested in potentially volunteering in this study as a participant or if you would like more information please contact: Dr. Nicole Coverdale, PhD, via e-mail: nc68@queensu.ca or phone: (613) 533-6000 ext 78507.

This study has been approved by the Queen's University Research Ethics Board.
